DETAILED ACTION

Election/Restrictions

The examiner withdraws the species restriction and will examine claims 1-21.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by US

2004/0134976 (Keyser). Keyser teaches a solder matrix (paragraph 25); b) microparticles secured with the solder matrix (paragraph 25); and c) the microparticles being constructed so as to be capable of arranging during a solder bonding process so as to provide a substantially uniform separation between opposing soldered surfaces (paragraph 9 and 23); wherein the microparticles are embedded within the solder matrix (paragraph 25); wherein the microparticles are shaped so as to inhibit stacking while self arranging during a solder bonding process (paragraph 25); an amount of microparticles with respect to an amount of the solder matrix so as to inhibit stacking of the microparticles during a solder bonding process (paragraph 9 and 25); wherein the microparticles are shaped so as to inhibit stacking while self arranging during a solder bonding process (paragraph 9 and 25); wherein the microparticles comprise microspheres

(paragraph 25); wherein the microparticles comprise at least one of: (a) glass; (b) plastic; (c) elastomer; (d) metal; (e) semiconductor; (f) material capable of conducting electric current; or (g) dielectric material (paragraph 25); wherein the microparticles comprise generally regular particles; wherein the microparticles have a coefficient of expansion such that a combined coefficient of expansion of the microparticles and the solder matrix is in a range between the opposing soldered surfaces (paragraph 23); wherein the microparticles have a coefficient of expansion lower, higher or the same as a coefficient of expansion of the solder matrix (paragraph 23); wherein the microparticles are distributed substantially uniformly through the solder matrix (paragraphs 23-27 and figure 3); wherein the microparticles are embedded near an exterior surface of the solder matrix (figure 3, and paragraphs 23-27); wherein the microparticles are secured to an exterior surface of the solder matrix (figure 3, and paragraphs 23-27); wherein the plurality of microspheres comprises microspheres comprising at least one of: (a) glass; (b) plastic; (c) elastomer; (d) metal; (e) semiconductor; (f) material capable of conducting electric current; or (g) dielectric material. and b) a plurality of microspheres having a substantially similar diameter embedded within the solder matrix (paragraph 25 and figure 5, item 24).

Response to Arguments

Applicant's arguments with respect to claims 1-21 have been considered but are moot in view of the new ground(s) of rejection.
